RE: Ban of Chocolate Milk in NYC Schools

Dear Chancellor Carranza,

On behalf of New York Farm Bureau, the state’s largest general farm organization, I am writing to express our concern regarding the proposed ban of chocolate milk in New York City School meals. While we understand the intent is to serve healthy meals to children, this ban will have the opposite effect on children who receive meals at school and the nutrients they receive, as well as substantial economic impact on New York dairy farmers that are already experiencing hardship.

New York State is home to over 4,000 dairy farms and represents New York’s largest agriculture industry. Our dairy farmers are proud to supply a wholesome product to school children all across New York, including New York City. There have been many studies that show the importance dairy in children’s diets and the benefits of the vitamins it provides. Research has shown children who drink flavored milk consume more of the important nutrients related to healthy growth and development such as calcium, vitamin D, and potassium, in comparison to non-flavored milk drinkers. Additionally, studies have shown that flavored milk consumption is not connected with weight gain or even high total daily sugar intake in children1.

Flavored milk is a popular choice among children, with over two-thirds of milk served in schools being flavored milk, making it an essential way for children to receive their nutrition. Research has shown that removing flavored milk reduced nutritional intake in children, increased the amount of food waste as well as reduced the number of school meals served. In a study conducted by Cornell University of Oregon schools, the total daily milk sales decreased by 9.9% when flavored milk was removed from the cafeteria and contributed to a 6.8% decrease in children eating lunch2. In the Los Angeles Unified District, a 78% decrease in milk waste was shown when flavored milk was returned as an option as well as an increase in number of school meals served3.

The Dietary Guidelines and school meals program, as developed by the U.S Department of Agriculture, allows

---

for the consumption of both flavored and unflavored milk. Studies have shown that milk consumption at the noon meal is critical and is correlated with overall diet quality as well as calcium intake\textsuperscript{4}.

For these reasons, New York Farm Bureau urges you to continue to allow the option of flavored milk to children in New York City Schools.

Sincerely,
